PENTACARD® PETG CORE FILMS FOR LOYALTY AND HIGH-END CARDS NOW AVAILABLE FROM KLÖCKNER PENTAPLAST

Montabaur, Germany – April 6, 2008 – The Pentacard® film product line has been extended to include the new Pentacard® CC-M719/01 and Pentacard® CC-M730/18 PETG core films. These unique PETG films are the only PETG films produced in the industry using proprietary processing technology. These films exhibit excellent surface consistency, thickness control, and optical properties. These new films are an ideal supplement for paper/cardboard and polycarbonate for loyalty card, high-end card, and secure document applications. Klöckner Pentaplast is the only global supplier of these innovative films.

Pentacard® CC-M719/01 is designed for loyalty card applications with easy printing, laminating, punching, and embossing properties. The proprietary embossed surface offers consistent quality for excellent printability. Available in sheets and rolls/reels, this film is produced in two shades of white (bluish white and yellowish white).

Pentacard® CC-M730/18 is highly durable and ensures long life which is ideal for high-end cards and secured documents. The film's laminating temperature is engineered to provide the optimal processing window so as not to harm embedded chips or antennas; thus improving yield and quality while minimizing total cost per unit.

“Pentacard® CC-M730/18 and CC-M719/01 films were developed to offer our customers yet another alternative for loyalty card, high-end card, and secure documents applications,” notes Christopher Theis, Klöckner Pentaplast's business manager for card films. “The expansion of the card film range to include these films along with our existing Pentacard® line continues to provide our customers with the broadest selection of films in the industry.”
