KLÖCKNER PENTAPLAST INTRODUCES NEW PENTACARD® FILM FOR DUAL INTERFACE / CONTACTLESS READABLE CARD APPLICATIONS

Montabaur, Germany, November 15, 2011 – The Pentacard® film product line has been extended to include a new integrated card film solution for the growing segment of dual interface / contactless readable card applications. Engineered for enhanced durability and excellent machinability, this Pentacard® integrated card film solution is comprised of three films: 1) Pentacard® CC-M230/17 inlay film; 2) Pentacard® CC-M278/01 spacer film; and 3) Pentacard® CC-278/01 overlay film. This solution is designed for banking, ID, government, and other areas that require dual interface / contactless readable cards.

With enhanced durability and the highest opacity available in the marketplace today, Pentacard® CC-M230/17 inlay film is specifically engineered for embedding and protecting antennas. Pentacard® CC-M278/01 spacer film is designed with extremely narrow thickness tolerance to meet the requirement of distancing the antenna from the chip. Pentacard® CC-278/01 overlay film is ideal for growing personalization needs which require laser engraving, thermotransfer, or thermosublimation processing.

“The new Pentacard® integrated card film solution for dual interface / contactless readable card applications offers enhanced durability combined with excellent machinability for higher yields and improved productivity,” notes Dr. Jürgen Bundschuh, Business Manager for card films in Europe. “This new integrated card film solution will help our customers reach their productivity goals in a growing competitive environment.”

About the Klöckner Pentaplast Group

The Klöckner Pentaplast Group is the world’s leading producer of films for pharmaceutical, medical device, food, electronics, and general-purpose thermoform packaging, as well as printing and specialty applications. Founded in 1965 in Montabaur, Germany, Klöckner Pentaplast has grown from its initial facility to 17 current production operations in 11 countries.
